APPLICATION COMPLETENESS DETERMINATION

Based on information submitted in applications for Authority to Construct and Permit to Operate a power generating plant consisting of two gas turbine power stations (Application Nos. 973880 and 973881) the San Diego County Air Pollution Control District has determined that these applications are complete pursuant to Rule 18 of the District's Rules and Regulations.

This completeness determination therefore commences a 180-day period available to the District to take action on the application for Authority to Construct. Although 180 days is available, the District makes every effort to take action as early as possible.

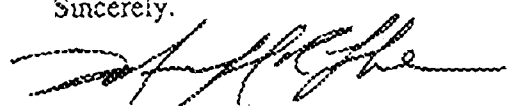

Despite this completeness determination, the District has the authority to require amplification and/or clarification of all information submitted. Prompt submittal of such information will assure expeditious action.

This determination is based on all information submitted to the District. If substantive changes are made to the information on which the applications are being based and evaluated, the applications must be amended. This will result in commencement of a new 180-day period for the District to take action on the applications and the amendment.

This determination also acknowledges that the proposed emission offsets rely in part on emission reduction credits with lives that may be less than the project life. To remedy this, the applications propose additional up-front emission reduction credits. To approve this, District Rule 20.1 will need to be amended. If such amendments cannot be accomplished, the offset proposal (and applications) will have to be amended to demonstrate compliance with the existing rules.

If you have any questions regarding this action, please contact Arthur Carbonell at (858) 694-3606 or myself at (858) 694-3311.

Sincerely,

for DANIEL A. SPEER
Senior Air Pollution Control Engineer
